PROFESSIONAL SUMMARY

Mechatronics Technology graduate (B.Tech, 2025) specialized in industrial automation and control systems, targeting a Control & Automation Engineer role. Core skills: Siemens Programmable Logic Controller (PLC) programming (S7-300 and S7-1200, TIA Portal, Ladder/STL/SCL), WinCC Supervisory Control and Data Acquisition (SCADA) and Human-Machine Interface (HMI) design, motor drives (VFD), and classic control panel design. Hands-on experience gained through five industrial trainings and practical projects, seeking an entry-level full-time role with immediate availability.

EDUCATION

Bachelor of Technology in Mechatronics - Higher Technological Institute in Beni Suef (2021-2025)
Cumulative Grade: Very Good | Final Year Grade: Excellent

Diploma in Mechatronics Technology - Higher Technological Institute in Beni Suef (2021-2023)

INTERNSHIPS AND TRAINING

PLC Advanced and SCADA/HMI Training - HA Consulting Group (2026)

- Programmed Siemens S7-300 and S7-1200 PLCs in structured languages (SCL, STL) using TIA Portal, and handled analog input/output signals.
- Configured S7-300 and S7-1200 hardware, integrated motor drives, and programmed rotary encoders.
- Designed full SCADA/HMI monitoring screens in WinCC and simulated complete plant automation scenarios.

Classic Control, PLC and Motor Drives Training - HA Consulting Group, Al-Abbasiya (2025)

- Designed and wired classic control circuits (contactors, relays, timers, motor starters).
- Programmed PLCs and installed and maintained machine control systems and motor drive units.

Production Lines and Pressing Machines Training - Linto Ceramics Factory (2024)

- Supported operation and maintenance of production lines, pressing machines, and electrical panels.
- Troubleshot production faults to reduce downtime and improve line efficiency.

Heavy Equipment and Hydraulic Systems Training - Arab Contractors, Tanta (2023)

- Serviced and troubleshot hydraulic systems on construction and industrial equipment.
- Followed preventive maintenance procedures for heavy machinery.

Mechatronics Engineering Training - South Delta Electricity Company, Tanta (2022)

- Studied electrical, automation, and control systems inside power generation facilities.
- Applied mechatronics principles across electrical and mechanical systems in the energy sector.

PROJECTS

Automatic Filling and Capping of Medical Bottles
Automated line that fills and caps bottles in sequence using sensors, actuators, and PLC control logic.

SCARA Robot
Designed and built a 4-axis SCARA robot arm for pick-and-place tasks, covering mechanical design, motor control, and programming.

CNC Automatic Tool Changer
Built a tool-changing mechanism for a CNC machine to switch tools automatically during machining.

3D Scanner
Built a scanner that captures an object's geometry and converts it into a 3D digital model.

TECHNICAL SKILLS

- PLC Programming: Siemens S7-300 and S7-1200, TIA Portal, SIMATIC Manager, Ladder, STL, SCL, analog signals, rotary encoders
- SCADA and HMI: WinCC, Factory IO, monitoring screens, plant simulation
- Drives and Control: motor drives (Variable Frequency Drives - VFD), classic control panel design, control systems design
- Mechanical and Fluid Power: hydraulic and pneumatic systems, CNC programming, SolidWorks
- Electronics and Programming: Arduino, practical electronic circuits, C++, Python
- Other: robotics and automation, computer hardware and software maintenance, Microsoft Office

COURSES

PLC (S7-300 and S7-1200 - TIA Portal), SCADA and HMI, Motor Drives, Classic Control, SolidWorks, Practical Electronics Circuits, Arduino, Programming (C++, Python, HTML), Computer Hardware and Software Maintenance

LANGUAGES

Arabic: Native

English: Good
