Summary

Mechatronics Technology graduate (B.Tech, 2025) with hands-on training in Siemens S7-300 and S7-1200 PLC programming, WinCC SCADA/HMI, motor drives, and classic control panels, plus practical exposure to production line maintenance and hydraulic systems through five industrial trainings. Basic understanding of building systems, including fire alarm and firefighting, HVAC, elevators, and low-current systems. Seeking a low-current (ELV) engineering role where I can apply my control background and build hands-on experience in building systems maintenance.

Education

Higher Technological Institute in Beni Suef — 2021 - 2025

Bachelor of Technology in Mechatronics

Cumulative Grade: Very Good · Final Year Grade: Excellent

Higher Technological Institute in Beni Suef — 2021 - 2023

Diploma in Mechatronics Technology

Internships & Training

PLC Advanced & SCADA/HMI — 2026

HA Consulting Group

- Programmed Siemens S7-300 in structured languages (SCL, STL) and handled analog I/O signals.
- Configured S7-300 hardware, integrated motor drives, and programmed rotary encoders.
- Designed full SCADA/HMI monitoring screens in WinCC and simulated complete plant automation scenarios.

Classic Control, PLC & Motor Drives — 2025

HA Consulting Group, Al-Abbasiya

- Designed and wired classic control circuits (contactors, relays, timers, motor starters).
- Programmed PLCs and installed and maintained machine control systems and motor drive units.

Production Lines & Pressing Machines — 2024

Linto Ceramics Factory

- Supported operation and maintenance of production lines, pressing machines, and electrical panels.
- Troubleshot production faults to reduce downtime and improve line efficiency.

Heavy Equipment & Hydraulic Systems — 2023

Arab Contractors, Tanta

- Serviced and troubleshot hydraulic systems on construction and industrial equipment.
- Followed preventive maintenance procedures for heavy machinery.

Mechatronics Engineering Training — 2022

South Delta Electricity Company, Tanta

- Studied electrical, automation, and control systems inside power generation facilities.
- Applied mechatronics principles across electrical and mechanical systems in the energy sector.

Projects

Automatic Filling & Capping of Medical Bottles

Automated line that fills and caps bottles in sequence using sensors, actuators, and PLC control logic.

SCARA Robot

Designed and built a 4-axis SCARA arm for pick-and-place tasks, covering mechanical design, motor control, and programming.

CNC Automatic Tool Changer

Built a tool-changing mechanism for a CNC machine to switch tools automatically during machining.

3D Scanner

Built a scanner that captures an object's geometry and converts it into a 3D digital model.

Technical Skills

- **PLC Programming:** Siemens S7-300, S7-1200 · Ladder, STL, SCL · analog signals · rotary encoders
- **SCADA / HMI:** WinCC · monitoring screens · plant simulation
- **Drives & Control:** motor drives (VFDs) · classic control panel design · control systems design
- **Building Systems (basic):** fire alarm & firefighting · HVAC · elevators · low-current systems
- **Electronics & Programming:** Arduino · practical electronic circuits · C++ · Python
- **Other:** robotics and automation · computer hardware and software maintenance · Microsoft Office

Courses

PLC, SCADA & HMI · Motor Drives · Classic Control · SolidWorks · Arduino · Programming (C++, Python, HTML) · Computer Hardware & Software Maintenance
